
Input material preparation
30 min to 1 h
Cultured cells
DNase treatment (optional)
Start at Step 1
Tissue
Nucleus extraction
Start at Step 8
Peripheral blood
PBMC isolation
Start at Step 1
Pause point: Cells or nuclei can be cryopreserved
Transposition
2.5 h
Cell lysis
Transposition reaction
Pause point: Transposed DNA can be stored at –20 °C for up to 2 weeks
Column-based cleanup of transposed DNA
Pause point: Eluted DNA can be stored at –20 °C indefinitely
Barcoding and amplifying libraries
3.5 h
Library barcoding and pre-amplification
Library concentration determination
Additional cycles of amplification to obtain standard concentration
Pause point: Amplified DNA can be stored at –20 °C for 2 weeks
Library cleanup and QC
2 h
Column-based cleanup of amplified libraries
Final library concentration determination
Assess library quality by low-depth sequencing (recommended)
Pause point: Finished libraries can be stored at –20 °C indefinitely
Sequencing and data analysis
Pool libraries with compatible barcodes
High-depth sequencing to ~10 M read pairs
Alignment and data analysis
